

Executive Summary

Project: [scottyab/rootbeer](https://github.com/scottyab/rootbeer)

Prepared by: Alvin S.

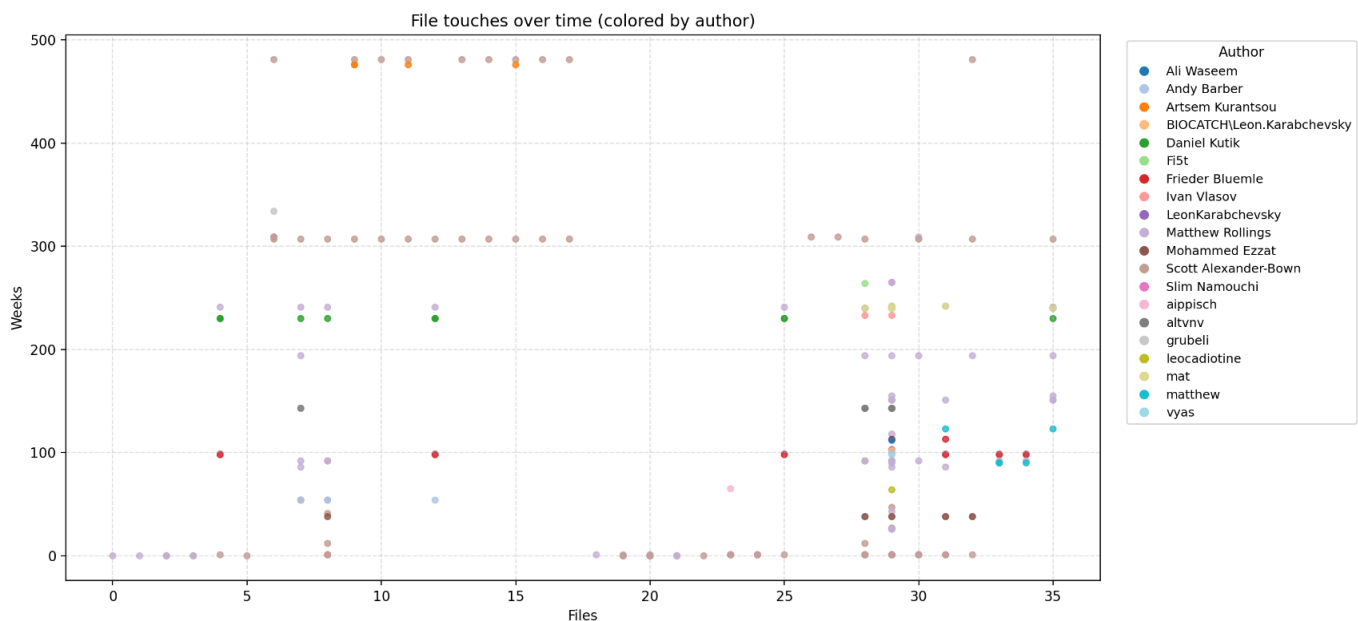

Purpose: Project status and development activity overview

Repository: <https://github.com/asango01/Group-3>

Overview: This report summarizes the development activity of the Rootbeer project based on an analysis of its GitHub commit history.

Development Activity: Overall, the project shows steady development over a long period of time, indicating that Rootbeer is an actively maintained codebase. The scatter plot illustrates file modifications over several hundred weeks.

Based on the activity, Scott Alexander-Brown has been a key asset to the team. Artsem Kurantsou has the least amount of activity. Verbal coaching session is recommended to better understand their needs and assist them if needed. If there is no change over time, a recommendation of separation may be made.

Git command usage:

The following command are ones that I used frequently while reviewing the repository.

- Git branch: created an isolated branch for staging.
- Git checkout: ensured production is switched to the correct branch.
- Git commit: review staged changes.
- Git diff: compare changes.
